## 250 AMP SFT-STYLE FEED THROUGH TERMINAL - Imperial

Our SFT Style terminal has performance characteristics identical to our LFT Style terminal but is specially designed for mounting onto thin or weak panels. The SFT can also reduce the costs of a single microgrid energy storage system by \$2,000 and can accept the same snap-on rigid or flexible covers as our LFT Style terminal. The brass core is available with nickel plating for harsh environments and remains cool at extreme charge or discharge rates. Equipping your design with these watertight, single pole, wrench disconnect terminals will enable system integrators to easily incorporate your modules into the MicroGrid, Reserve Power, Vehicle Electrification or APU systems the end-user requires, regardless of battery chemistry. Whether you are coupling battery modules in series for a stationary power application, an immersion-cooled motive power system, a single SLI module, a telecom or datacenter reserve power system or simply bringing DC power from the inside to the outside of any bulkhead of any material or thickness, our SFT Style 250 amp terminals, Covers and Accessories were designed with your application in mind.

### ELECTRICAL

Current (each of these current profiles causes a maximum 30°C temperature rise)

- ▶ Continuous Rated Current (CRC) (per IEC 61984 and UL1977)
- ▶ Current Profile #2 - 50% CRC for 60min + 1 sec peak + 50% CRC for 60 min
- ▶ Current Profile #3 - 50% CRC for 60min + 10 sec peak + 50% CRC for 60 min
- ▶ Current Profile #4 - 50% CRC for 60min + 30 sec peak + 50% CRC for 60 min
- ▶ Current Profile #5 - 50% CRC for 60min + 60 sec peak + 50% CRC for 60 min
